

Local Area Personal Income, 1982–97

By Wallace K. Bailey

THIS ARTICLE presents new estimates of personal income and per capita personal income for local areas for 1997 and revised estimates for 1995–96 (see the box “**Definitions of Local Areas**”). The estimates of personal income for local areas have been revised to incorporate the results from the revision to the annual estimates of State personal income for 1982–96 that was released in September 1998 and to incorporate new and revised county-level source data for 1995–96.¹ The revised estimates of per capita personal income for local areas for 1990–96 also reflect the revised estimates of county population released by the Bureau of the Census in March 1999.

1. See Wallace K. Bailey, “**State Personal Income, Revised Estimates for 1982–97**,” SURVEY OF CURRENT BUSINESS 78 (October 1998): 20–41. This revision to State personal income combined the usual annual State revision, affecting the estimates for 1995–97, with the incorporation of the definitional revision to the national income and product accounts that removed the capital gains distributions of regulated investment companies (mutual funds) from personal dividend income, affecting the estimates for 1982–97.

Definitions of Local Areas

“Local areas” comprise metropolitan areas, BEA economic areas, and counties.

The metropolitan areas (table 1) in all States are those defined in terms of counties and county equivalents by the Office of Management and Budget (OMB) for Federal statistical purposes.¹ These areas now include Missoula, MT, which was recognized as a metropolitan statistical area by OMB in June 1998.

The BEA economic areas (table 2) each consist of one or more economic nodes—usually metropolitan areas—and the surrounding counties that are economically related to the node.² These economic areas encompass all counties and county equivalents in the Nation.

The counties (table 3) include county equivalents. For Virginia, the estimates are presented for the larger independent cities as well as for most counties; the estimates for the smaller independent cities are combined with the estimates for adjacent counties.

1. For the New England region, OMB’s preferred definitions of the metropolitan areas are in terms of cities and towns, but the available data for cities and towns are not sufficient to prepare estimates of personal income.

The list of the metropolitan areas and their constituent counties and county equivalents is available on BEA’s Web site at <www.bea.doc.gov/bea/regional/docs/msalist.htm> and from the National Technical Information Service (call 703–487–4650, accession no. PB98–146160).

2. For a description of the economic areas and the methodology used to define them, see Kenneth P. Johnson, “**Redefinition of the BEA Economic Areas**,” SURVEY 75 (February 1995): 75–81. Also see the box “**BEA Economic Areas**” on page 8 in this issue.

The first three sections of this article discuss the revisions to the estimates for selected metropolitan areas for 1996 and present the metropolitan areas with the fastest and slowest growth in personal income in 1997 and the metropolitan areas with the highest and lowest per capita personal income in 1997. The last section of the article describes the source data used to prepare the revised estimates for 1995–96 and the new estimates for 1997.

Revisions to the 1996 estimates for metropolitan areas

For most metropolitan areas, the revisions to the 1996 estimates of personal income were small; the revisions to the estimates for 1982–95 were generally smaller. For 1996, only four areas had downward revisions of more than 3.0 percent, and only two areas had upward revisions of more than 1.0 percent (**table A**).

Together, the 10 areas with the largest downward revisions and the 4 areas with upward revisions greater than 0.5 percentage point accounted for only 3.0 percent of the Nation’s personal income in 1996. Of these areas, only Detroit, MI, has personal income greater than \$20 billion; the other 13 areas together account for only 1.2 percent of the national total of personal income.

In general, the downward revisions are larger than the upward revisions, mainly because of downward revisions to the national estimates of dividends, interest, and rent and of other labor income.² The revision to dividends, interest, and rent was mainly accounted for by a downward revision to the estimate of dividends that reflects the removal of capital gains distributions of mutual funds (see **footnote 1**). The revision to other labor income was mainly accounted for by a downward revision to employers’ contributions to pension and profit-sharing plans in the motor vehicle manufacturing industry.

2. In the available table presenting the local area personal income estimates in component detail, dividends, interest, and rent are presented together.

The incorporation of the revision to dividends, interest, and rent contributed substantially to the downward revisions for 7 of the 10 metropolitan areas with the largest downward percentage revisions. The incorporation of the revision to other labor income contributed substantially to the downward revisions for six of these areas and more than accounted for the largest downward revision—that for Kokomo, IN.

The upward revisions for the four metropolitan areas with the largest upward percentage revisions resulted largely from the incorporation of newly available or revised source data for wage and salary disbursements, for nonfarm proprietors' income, and for the adjustment for residence. For three of these areas, these revisions were partly offset by the incorporation of the national revision to dividends, interest, and rent.

Fastest and slowest growing metropolitan areas

Eight of the ten metropolitan areas with the fastest growth in personal income from 1996 to 1997 were in the Southwest and Far West regions (table B). Five of the areas were in Texas, and two were in California.

In all 10 of these areas, the fast growth in personal income in 1997 continued the pattern of above-average growth in 1996. In eight of these areas, the rate of growth from 1995 to 1996 had exceeded the national growth rate by 1.7 percent-

age points or more, and in all of the areas, the rate of growth in 1997 exceeded that in 1996. Austin-San Marcos, TX, and San Jose, CA, were also among the 10 fastest growing areas in 1996.

The 10 metropolitan areas with the slowest growth or with a decline in personal income in 1997 include adjacent areas in eastern

OLI Other labor income by place of work

NFPI Nonfarm proprietors' income

DIR Dividends, interest, and rent

TP Transfer payments

AFR Adjustment for residence

Washington (Yakima and Richland-Kennewick-Pasco) and on the Ohio-West Virginia border (Steubenville-Weirton, OH-WV, and Wheeling, WV-OH).

In 6 of the 10 slow-growing areas, growth in 1996 was also slow, and in eight of the areas, growth was slower than in 1996. Flint, MI, and Honolulu, HI, were also among the 10 slowest growing areas in 1996.

In Dover, DE, Grand Forks, ND, and Yakima, WA, the slow growth contrasted with fast growth in 1996. In Dover, dividends, interest, and rent grew sharply in 1996, and manufacturing earnings declined substantially in 1997. In Grand Forks and Yakima, farm proprietors' income grew sharply in 1996 and declined sharply in 1997.

Highest and lowest per capita personal income metropolitan areas

The 10 metropolitan areas with the highest per capita personal income in 1997 were generally large in terms of personal income and population; together, they accounted for 7.5 percent of the nation's personal income and 5.0 percent of its population (table C). Eight of the areas are on the east coast, and two are on the west coast. Six of the areas are primary metropolitan statistical areas (PMSA's) that are part of the New York-Northern New Jersey-Long Island consolidated metropolitan statistical area (CMSA), and two are PMSA's in the San Francisco-Oakland-San Jose CMSA. These 10 areas were also the 10 high-

est in per capita personal income in 1996, and in seven of them, per capita personal income increased as much as or more than the increase in per capita personal income for the Nation.

1. A primary metropolitan statistical area (PMSA).

2. A New England county metropolitan area that is presented as a PMSA.

Acknowledgments

The revised estimates of local area personal income were prepared by the Regional Economic Measurement Division under the direction of Robert L. Brown, Chief. Hugh W. Knox, Associate Director for Regional Economics, provided general guidance.

Estimates of nonfarm wages and salaries and other labor income were prepared by the Regional Wage Branch under the supervision of Sharon C. Carnevale, Chief. Major responsibilities were assigned to Elizabeth P. Cologer, Lisa C. Ninomiya, Michael G. Pilot, John A. Rusinko, and James M. Scott. Contributing staff members were Susan P. Den Herder, Ann E. Dunbar, Lisa B. Emerson, John D. Laffman, Lela S. Lester, Russell C. Lusher, Richard A. Lutyk, Paul K. Medzerian, Mauricio Ortiz, Michael Phillips, Adrienne T. Pilot, William E. Reid, Jr., Victor A. Sahadachny, Elizabeth F. Stell, and Jaime Zenzano.

Estimates of farm wages and salaries and other labor income and of proprietors' income, property income, transfer payments, personal contributions for social insurance, and the adjustment for residence were prepared by the Regional Income Branch under the supervision of James M. Zavrel, Chief. Major responsibilities were assigned to Charles A. Jolley. Contributing staff members were Elaine M. Briccetti, Carrie L. Case, Daniel R. Corrin, Toan A. Ly, W. Tim McKeel, Jeffrey L. Newman, Suet M. Ng, James P. Stehle, Ellen M. Wright, and Marianne A. Ziver.

The public use tabulations and data files were assembled and the tables for this article were prepared by the Regional Economic Information System Branch under the supervision of Kathy A. Albetksi, Chief. Major responsibilities were assigned to Gary V. Kennedy. Contributing staff members were H Steven Dolan, Michael J. Paris, Albert Silverman, Nancy E. Smith, Callan S. Swenson, Monique B. Tyes, and Mary C. Williams.

The 10 areas with the lowest per capita personal income in 1997 were generally small in terms of personal income and population; together, they accounted for 0.6 percent of the Nation's personal income and for 1.1 percent of its population. Eight of the ten areas are in the Southwest or

Southeast regions, and the six lowest ranking areas are on the Mexican border. All of these areas except Visalia-Tulare-Porterville, CA, were among the 10 lowest in per capita personal income in 1996, and in seven of them, per capita personal income increased less than the national increase.

Alternative Measures of County Employment and Wages

Three widely used measures of annual county employment and wages by place of work are the Census Bureau's employment and payroll data in the *County Business Patterns* (*CBP*) series, the Bureau of Labor Statistics' (*BLS*) employment and wage tabulations from the unemployment insurance program, and *BEA*'s measure of total wage and salary disbursements and employment.

The *CBP* data are an annual extension of the Census Bureau's quinquennial economic censuses; the data are derived from Federal administrative records and survey information of business establishments.¹ The *BLS* county employment and wage data are the product of a Federal-State cooperative program known as the Covered Employment and Wages, or *ES-202*, program; the data are derived from tabulations of monthly employment and quarterly total wages of workers covered by State unemployment insurance (*UI*) legislation and of Federal workers covered by the unemployment compensation for Federal employees (*UCFE*) program. *BEA* publishes total employment and total wage and salary disbursements as part of its local area personal income estimates, a comprehensive measure of the local area economies; the estimates are derived from the *BLS* data, which account for 94 percent of the wage and salary component of *BEA*'s estimates of wages and salaries.

1. The coverage of *CBP* is somewhat broader than that of the economic censuses. For example, air transportation and banking are included in *CBP* but not in the economic censuses.

1. See *County Business Patterns, 1996* (Washington, DC: U.S. Government Printing Office, 1998).

2. See *Employment and Wages Annual Averages, 1996* (Washington, DC: U.S. Government Printing Office, 1997).

3. Includes differences in coverage of private education, membership organizations, and government.

4. Consists of unreported wages and salaries paid by employers and of unreported tips.

5. Consists of voluntary contributions by employees. Before 1985, employers were not required to report these contributions. In 1985, reporting requirements were enacted by over one-half of the States; by 1990, the requirement had been enacted by almost all States.

6. Consists of the difference between estimates based on more comprehensive source data and *BLS* wages and salaries for the following industries: Agriculture, forestry, and fishing; railroad transportation; health services; educational services; social services; membership organizations; private households; and the Federal Government.

7. Consists of wages and salaries for insurance agents classified as statutory employees, for students and their spouses employed by public colleges or universities, for nonprofit organizations not participating in the *UI* program (in industries not listed in footnote 6), and of other coverage adjustments.

BEA Bureau of Economic Analysis

BLS Bureau of Labor Statistics

The coverage of the *CBP* data primarily differs from that of the *BLS* data because the *BLS* data cover civilian government employees, whereas the *CBP* data exclude most government employees (exhibit A).² In addition, the *CBP* coverage of the employees of educational and membership organizations and of small nonprofit organizations in other industries is more complete than the coverage of these employees in the *BLS* data. In contrast, the *BLS* data cover some agricultural production employees and household employees, all of whom are excluded from the *CBP* data. Finally, the *BLS* employment data are an annual average of monthly data, whereas *CBP* reports employment for the month of March.

The *BEA* employment and wage estimates differ from the *BLS* data because *BEA* makes adjustments to account for employment and wages not covered, or not fully covered, by the State *UI* and *UCFE* programs. First, *BEA* uses additional source data to estimate most or all of the employment and wages for the following industries: Farms, farm labor contractors, private households, private elementary and secondary schools, religious membership organizations, railroads, military, and U.S. residents who are employed by international organizations and by foreign embassies and consultates in the United States. Second, employment and wage estimates are added to the *BLS* data to bridge small gaps in *UI* coverage: For nonprofit organizations not participating in the *UI* program (several industries), for students and their spouses employed by colleges or universities (private education and State and local government), for elected officials and members of the judiciary (State and local government), for interns employed by hospitals and by social service agencies, and for insurance agents classified as statutory employees (insurance agencies). Third, *BEA* adjusts employment and wages for misreporting under the *UI* and *UCFE* programs.³

The Census Bureau released employment and payrolls for 1996 on December 17, 1998.⁴ *BLS* released annual county total employment and average annual pay data for 1996 on November 12, 1998, on the *BLS* Web site, and county employment and wages at the SIC four-digit level are available upon request; *BLS* plans to accelerate the release of the data for 1997.⁵ *BEA*'s local area estimates of employment and total wage and salary disbursements for 1997 were released on December 30, 1998, on the *BEA* Web site.⁶

2. The *CBP* coverage of government employees is limited to those working in government hospitals, depository institutions, Federal and federally sponsored credit agencies, liquor stores, and wholesale liquor establishments.

3. For more information, see *Local Area Personal Income, 1969-92*, M-9—M-13. The text of this volume is available on *BEA*'s Web site at <www.bea.gov>; under "Regional," click on "Articles."

4. See the Census Bureau's news release at <www.census.gov/press-release/cb98-233.html>. In addition, see Bureau of the Census, *County Business Patterns, 1996* (Washington, DC: U.S. Government Printing Office, 1998).

5. See the *BLS* news release at <www.bls.gov/news.release/eaapc.toc.htm>. See also *Employment and Wages Annual Averages, 1996* (Washington, DC: U.S. Government Printing Office, 1997). This publication includes State-level data.

6. These estimates are released in advance of the full set of the local area personal income and employment estimates; go to <www.bea.gov/bea/regional/reis/ca34/index.htm>.

New and revised source data

This section identifies the principal source data used to revise the estimates for 1995–96 and to prepare the estimates for 1997.

Revised estimates for 1995–96.—The estimates of most of the components of personal income and of the adjustment for residence—which is an estimate of the net inflow of the earnings of inter-area commuters—now reflect the incorporation of new source data.³

For wage and salary disbursements, other labor income, and personal contributions for social insurance, estimates were revised to incorporate revised Bureau of Labor Statistics (BLS) tabulations of wages and salaries paid by employers that are based on reports under the State unemployment insurance system.⁴

For nonfarm proprietors' income, estimates were revised to incorporate data on the number of small establishments by county from the 1994 and 1995 issues of the Census Bureau series *County Business Patterns*.⁵

The 1996 estimates of dividends, interest, and rent and of the residence adjustment were revised

3. For the source data used previously, see Wallace K. Bailey, "Local Area Personal Income, 1969–96," SURVEY 78 (May 1998): 28–54.

4. For more information about the BLS data, see the box "Alternative Measures of County Employment and Wages."

5. The estimates of nonfarm proprietors' income do not incorporate data from 1995 from the Internal Revenue Service on gross receipts and net income of sole proprietorships and partnerships, because these data were not available at the time of the revision. When the local area estimates for 1998 are prepared, these data will be available for both 1995 and 1996.

to incorporate Internal Revenue Service tabulations of individual income tax return data for 1996.

New estimates for 1997.—The estimates of wage and salary disbursements are largely based on BLS tabulations of employers' 1997 payrolls. The estimates of other labor income and of personal contributions for social insurance are mainly based on the estimates of wages and salaries.⁶

For farm proprietors' income, the estimates of government subsidy payments for all States and of gross receipts for most of the major farm States are based on 1997 data from the U.S. Department of Agriculture and from State agricultural statistical agencies. The estimates of the production expenses are mainly based on data from the 1992 Census of Agriculture.

For transfer payments, the estimates of social security benefits are based on 1997 data from the Social Security Administration, and the estimates of veterans benefits, on 1997 data from the Department of Veterans Affairs. The estimates of unemployment compensation and of transfer payments under most of the major means-tested programs—including medicaid, family assistance, supplemental security income,

6. A detailed description of the methodology is available on BEA's Web site at <www.bea.doc.gov> and on the CD-ROM *Regional Economic Information System, 1969–97* (see the box "Data Availability"). The methodology on the CD-ROM is an updated version of the methodology presented in U.S. Department of Commerce, Bureau of Economic Analysis, *Local Area Personal Income, 1969–92* (Washington, DC: U.S. Government Printing Office, September 1994).

Data Availability

This article presents summary estimates of personal income and per capita personal income for 1995–97. More detailed estimates for 1969–97 are available in other media.

The entire set of estimates for all areas is available on the CD-ROM *Regional Economic Information System, 1969–97*—product number RCN-0230, price \$35.00. This CD-ROM also contains the quarterly State estimates of personal income for 1969–98 and an updated description of the sources and methods used to estimate local area personal income. The CD-ROM is designed for use with microcomputers equipped with the Windows 95 or other 32-bit Windows operating systems, and it includes a program to help users select, display, print, and copy the tables. For order information, see the inside back cover of this issue.

The local area personal income estimates are also available through the members of the BEA User Group—State agencies and universities that help BEA to disseminate the estimates within their States.

The detailed estimates in the principal set of tables consist of personal income by type of payment, earnings by Standard Industrial Classification (SIC) two-digit industry, population, and per capita personal income for local areas for 1969–97. Supplemental tables present estimates of employment by SIC division, of transfer payments by program, and of the major categories of farm income and expenses.

In addition, two sets of tables presenting summary estimates are available. One set presents personal income, per capita personal income, and population, and the other set presents wage and salary disbursements, employment, and average wages per job (the ratio of wages and salaries to employment). Both sets for all counties and metropolitan areas are available on BEA's Web site at <www.bea.doc.gov/bea/regional/data.htm>.

For more information about these products or to request the list of the BEA User Group members, call BEA's Regional Economic Information System at 202-606-5360, fax 202-606-5322, or E-mail reis.remd@bea.doc.gov.

and food stamps—for most States are based on 1997 data from the State government agencies that administer the programs.

For nonfarm proprietors' income, for dividends, interest, and rent, and for the residence

adjustment, the estimates are mainly based on extrapolations of the data that were used to prepare the 1996 estimates.

Tables 1 through 3 follow.
